

Planetary Mapping Winter School 2022

Monday, February 7, 2022 - Friday, February 11, 2022

Scientific Program

The school will provide the tools and base knowledge to start mapping on a planetary body. For this goal, the participants will have to opportunity to follow different kinds of activity, with different levels of engagement.

Practical Demonstration

Practical demonstrations will help participants familiarize with topics, methods or tools relevant to geological mapping.

Group Activity

During groups activity, the participants will be subdivided into smaller groups to practice geological mapping on the Moon, Mercury and Mars. Each group will be led by a different instructor giving them the opportunity to better interact with the teachers.

Frontal Lecture

Frontal lectures are seminal activities that will introduce relevant topics to the participants.

Seminar

Seminars by invited experts on relevant topics encountered during the day activities
