

# “SPASE/HAPI-*Inside*” and Open metadata

To support systems with “SPASE/HAPI-*Inside*,” **we need...**

- *Better communication with current systems*
- *Better coordination between different systems (**registries & services**)*
  - *Open access to metadata registries to allow interoperability*
  - *Clearly defined Naming Authorities (NA) for SPASE ResourceIDs*
  - *No duplications between systems*
    - ❖ ***Distributed registries vs. single registry ?***

To encourage broader adoption of standards, **we need...**

- *Increase in community awareness*
- *Tools to reduce standard adoption barriers*
  - *All data sources - Space (sat., rockets & balloons), ground, & model*
  - *All data/measurement types*
